Professor Joshua Lederberg
Department of Genetics
Stanford University
School of Medicine
Palo Alto, CA 94305

Dear Professor Lederberg:

In November I hope to make a trip to the West Coast. I would like very much to visit you some time during the first three weeks of November. At that time I could give a talk on branched structures, a subject which excites me very much.

Enclosed is an abstract of the subject. The talk could be a departmental seminar with the subject confined to limited areas of your choosing. Alternatively (or in addition) I could give a talk to a general scientific audience. At the risk of being immodest I can say I have something new to contribute on all the topics given in the abstract.

Sincerely,

Gerald Oster
Professor of Biophysics
